

To Our Valued Customers:

The Water Systems Division of Baker Manufacturing Company, LLC is the leading manufacturer of water system products in the United States. With the increasing concern for the environment and changing regulations, we began our transition to lead free inventory several years ago. The new regulations that went into effect on January 4, 2014, prohibit manufacturers and importers from selling plumbing fixtures/parts that do not meet the new standards. The maximum content of lead in plumbing devices is now limited to a weighted average of .025% or less.

Baker Manufacturing Company, LLC met these requirements by January 1, 2014. As we continue to expand our lead free product line, we will update you on these additions as we introduce them to the market.

We will also continue to make available leaded brass and bronze products for sales to select markets (only for applications that are not used with water for human consumption).

Please refer to our website for a link to obtain a complete listing of our no lead products.

Sincerely,
Donna M. Weller
Chief Financial Officer
Baker Mfg. Co., LLC
