

Safe clean water where you need it most.

How Does it Work?

MicronGuard™ enhances the filtration ability of the filter. The base media was developed for NASA space vehicles. Simply put, it uses nanotechnology to remove far smaller things from water than any filter alone would be capable of while maintaining a high flow rate.

Get clean, safe water, free from harmful bacteria and contaminants where you need it most with the Campbell Ultrafiltration+ Under Sink Inline Filter. The exceptional point of use filtration technology developed and proven in the medical and dental industries is now available for home use.

This small (6" x 2") yet mighty filter can be used under the sink, for the refrigerator water dispenser, ice makers, and small spaces, like RVs and boats.

REDUCES

- 💧 Bacteria **99.99%**
- 💧 Viruses **99.99%**
- 💧 Cysts **99.95%**
- 💧 Forever Chemicals **95%**
PFAS (PFOA & PFOS)
- 💧 Heavy Metals **≥85%**
(Lead, Copper, Iron)
- 💧 Microplastics

AND MORE

- 💧 Easy to install & maintain
- 💧 Certified to NSF/ANSI Standards 42, 53, 372
- 💧 Flow rate of 2.2 GPM at 60 psi
- 💧 Designed and assembled in the USA
